\$349.99

## Description of Services:

**SmartTech:** A remote access through the internet from our computer to the computer that is in need of service. It can be accessed by any one of our technicians any where in the world, any time of the day, with an internet connection.

**Server Check-up:** A Server Check-up is essential for every business. The Server is basically the brain of your network. When we provide this service we login to your server, check all error logs, hardware application, check your disc space, and view all service performance reports. We will catch a problem 99% of the time before it happens!

**Backup Monitoring Service:** Monitor current back up solutions including tape drives, hard drives and other back up Medias. Also test the integrity of the data on the back up appliance monthly.
